by

What's New in the Portable Smart PC Locker?

Imagine that you're out of the house and in an unfamiliar place. On the way to your destination, you're suddenly stopped by a bank robber. How should you react? Should you call the police and get scared, or could you use your smartphone to lock your house from the outside? What if the robber is armed with a gun,

and you don't have one? As difficult as this scenario sounds, these problems might very well occur in real life. Considering how many people have access to their homes and computers, it is rather safe to say that almost everyone is affected by the recent surge in physical and digital theft. With the help of this handy software, you can easily lock your computer from any remote location - no access is needed. The program can even

be configured to shut down your computer after a number of failed attempts to type a valid password. Benefits What is so great about the Portable Smart PC Locker? It provides you with a number of convenient features that you can use to make your computer more secure. 1. Digital lockscreen In the event that you are out of the house and a thief makes an attempt to gain access to your PC, the Portable Smart PC Locker offers a digital

lockscreen that you can use to prevent your computer from being stolen. This feature is perfect for home owners who prefer having a unique password for every device that they use. 2. GUI-based lockscreen In order to provide you with a secure environment, the program comes with its own GUI-based lockscreen that allows you to control the settings of your computer. It is also possible to specify a password, which is then

used to restrict unauthorized access to your PC. 3. Intuitive interface As a native Windows application, the Portable Smart PC Locker comes with a very simple design that enhances the user experience. In addition, you can access the official manual or ask for help when you encounter difficulties. 4. Hotkeys In order to configure your computer in the most appropriate manner, you can also activate the HotKeys feature. You can use the

combination of two keys in order to quickly lock or unlock your system. 5. Stealth mode

Sometimes, you might need to access your locked computer from a different location.

Therefore, you can configure your system to not draw attention to it, by disabling the CD-ROM access and Task

Manager functions. System

Requirements: This application works only on Windows computers, therefore it requires

the presence of a Windows
operating system. The

System Requirements For Portable Smart PC Locker:
