Connections AutoCAD is connected to many other applications. AutoCAD is built in AutoLISP, a very high level procedural programming language. AutoLISP enables its users to create custom macros, connect to other applications, use 3D modeling, and publish their own add-on apps. Users can also write their own AutoLISP functions to automate tasks, such as connecting to other applications. AutoCAD is connected to other applications using the AutoLISP EXPORT function, allowing for automatic external macros to be automatically compiled into a function file format, which can be then linked to other applications. In addition to AutoLISP, there are also four more ways to connect to other applications: VBA - Visual Basic for Applications, an application programming interface (API) to connect to other applications. Visual Basic for Applications makes it easy for programmers to create custom AutoCAD macros. ObjectARX - An object-based API, compatible with the .NET framework, for connecting to other applications. C++ - An API to connect to other applications in C++. API Connections Server - An application programming interface compatible with a low level language, for writing custom add-on AutoCAD macros. Aside from connecting to other applications, AutoCAD can be connected to other AutoCAD objects, such as database tables and geometry. Operating Systems AutoCAD can be run on Windows, macOS, and Linux computers, including Macs, Windows laptops, and Linux desktops. All versions of AutoCAD include a version of AutoLISP, which allows users to create custom macros and other add-on applications, similar to the kind of programs available in 3D Studio Max. AutoCAD can also be installed on a Mac computer, and run without a Windows machine. Several third-party developers and script kiddies have made third-party versions of AutoCAD available for Linux computers. Database AutoCAD stores drawing and model information in a database called the drawing database. In addition to the standard graphical features such as block definitions and properties, there are also text and numeric properties. There is also a data warehouse tool to search for drawings and models, and create queries. The drawing database is organized in a tree structure, similar to a folder hierarchy. Any information can be stored on the server, including images, text, and blocks. The drawing database may be local to af5dca3d97

After the autocad activation key is inserted, the key can be used to activate the software again. A temporary copy of the key is kept in a folder where you can access it. On Windows, the key can be found in the Autocad 2013 folder or your Autocad directory. In Linux and macOS, the key is in the Autocad 2013 folder in the current working directory.
