Manual de calidad de ventas en escuela gratuito para adultos 2017 ii (spanish) Rotors Trying out new things is fine, but make sure you are safe while doing it. Now, you are looking at a screen where you must click Yes to make the configuration go into effect. Steps to Make Changes Within an Application in Windows There are two types of windows that you can configure. You can choose the type of window that you want to configure. You do this using the Tools menu. When you select Tools, then Options, you will find an option that enables you to change the type of the window that you want to configure. When you change the type of the window, you will see a different menu (as shown in the following image). Let's discuss the options of each of the two types of windows. Widescreen Widescreen. To configure this type of window, you must select the second option in the previous step. However, you do not have to select the second option to configure this type of window. If you simply want to move the window and/or resize it, you can do so by resizing the window or changing the location of the window. Normal This type of window is configured in two ways. First, you can change its size by resizing it. To do this, right-click on the title of the window, and then select Move from the context menu. You will be able to move the window, resize it, etc. Second, you can move the window by selecting it from the window list. Changing the Window Tab You can choose which tab to configure the window on. Let's discuss the options of each tab. Layout You can use this tab to configure the layout of your window. You have options to select in the following list: The window can be split horizontally, vertically, or both This is a list of the windows that you can configure. Toolbars You can use this tab to configure the type of toolbars that you want to configure in the window. You have options in the following list: Always
